- Usage For Production Process: Lamination, Vacuum Membrane Press, Hot Press, Wrapping And So On
- Highlight: **Deep Embossed PVC Wood Film,**

Product Description

0.14mm Thickness deep Embossed Wood Grain Design Wrapping Pvc Film For Mdf Profile Decoration

Product Description:

Our PVC foil is primarily made of Polyvinyl Chloride (PVC), a strong, flexible, and easy-to-work-with synthetic plastic material. It is available in a wide range of colors, patterns, and textures and can be used to achieve the look of natural materials such as wood, stone, fabric, and metal, providing an affordable alternative.

Our foil can be applied to a variety of surfaces in different places, indoor and outdoor, from doors to cabinets and furniture to walls, and it adheres well to different substrates. It also enjoys a reputation for its resilience to deterioration and strength and is often used in high-traffic areas.

The PVC foil is cheap compared to natural materials, bringing upscale aesthetics to projects at an economical cost. Plus, there are so many styles and finishes available from manufacturers that you can customize it to your exact requirements. It also requires minimal maintenance and can just be wiped down weekly with a damp cloth.

In short, the decorative PVC foil is an ideal choice for residential and commercial applications, such as kitchen and bathroom cabinets, interior doors, wall paneling, furniture surfaces, retail displays, and more.

Technical Parameters:

We offer a wide selection of aluminum composite panel with high quality and versatile design. Our ACP is available in a range of thickness from 0.1mm to 0.5mm, width from 1260mm and 1400mm, and length from 100 to 400m/roll. It provides a natural wood grain, solid color, marble, brick, and more designs. The surface treatment includes matt, super matt, embossed, high gloss, and soft touch. OEM and ODM are provided!

Applications:

Different Process for different application:

- 1.Membrane Press (vacuum press): This process is used for thicker surface boards with thickness of 0.20-0.50mm, width of 1260mm and 1400mm, and length of 100-300m/roll.It can be used on MDF, particleboard, wooden board, fiberboard, etc for doors, kitchen cabinet, wardrobe, furniture, etc. It can also cover embossed boards and cover five surfaces at the same time.
- 2.Wrapping Profiles: This process is used for a thinner film with thickness of 0.12 to 0.18mm, width of 40-1260mm, and length of 300-800m/roll. It can cover all kinds of profiles, including wood profile, aluminum profile, PVC profile, etc and can be used for door frame, window sill, base channel, PVC ceiling and so on.
- 3.Cold Laminating: This process uses a slightly thicker film with a thickness of 0.12-0.20mm, width of 1240-1260mm and length of 300-500m/roll. It can be applied to all types of flat panels such as wood panel, steel panel, aluminum panel, PVC panel, etc for doors and furniture.
- 4.Hot Laminating: This process is utilized with a thicker film with thickness of 0.16-0.30mm, width of 1260mm and length of 200-300m/roll. It can be used for PVC panel, steel panel, aluminum panel for doors, skirting and so on.
- 5.Self-adhesive: This process calls for a film with thickness of 0.10-0.20mm, width of 600mm/1220mm and length of 5-50m/roll. It can be used on any smooth surface for furniture and indoor decorations.
